THINK! ENERGY

PNM Home Works

Dear Teacher:

PNM is proud to sponsor Think! Energy PNM Home Works. Experienced energy educators will present this program and engage your students with interactive techniques and thought-provoking information, sparking interest in the crucial subject of energy use and energy efficiency. As an energy efficiency program manager at PNM, I believe we can all learn more about using electricity wisely, including installing products in our homes that help reduce the amount of energy we use.

I am proud PNM is helping customers, including your students, to have a positive impact on household energy use. Using less energy is also good for the environment, and PNM is committed to help ensure that New Mexico stays as beautiful as it is today. In addition to our energy efficiency programs, we are the largest provider of renewable energy in the state, including solar and wind facilities and the first utility scale geothermal facility.

Besides Think! Energy PNM Home Works, I hope you can take advantage of our other residential energy efficiency programs including refrigerator recycling rebates, the PNM Home Energy Checkup, air-conditioning rebates, home lighting discounts and more. We have included a brochure in the *Take Action Kits* outlining our residential energy efficiency programs available. Find out more about them at *pnm.com/save*.

By being our partner in energy efficiency, you support us in reducing the need for more power plants, which helps keep electricity rates lower for longer. Thank you for participating in Think! Energy PNM Home Works. I hope you find our efforts helpful and valuable.

Sincerely,

Colleen Santistevan
