Elk River Municipal Utilities

Dear Parent/Guardian:

Congratulations! Your child's class has been selected to participate in Think! Energy, provided by Elk River Municipal Utilities. Your family will learn ways to use energy more efficiently. Improving your home's energy efficiency is good for the environment and could save money on your utility bills. Your involvement and support will add to your child's understanding. Here are key aspects of the program.

## Energy Education

Your child will learn valuable energy concepts from their curriculum through their teacher.

## Energy Efficiency

- Through the program, you receive a *Take Action Kit* of high quality, high-efficiency products and a *Family Guide*. Review the activities in the *Family Guide* and help your child install the energy-efficient products. The *Installation Instructions* in the kit and the installation videos on the program website can assist you. You will be pleased to discover how much energy and money your family will save. The experience at home will complete the learning cycle.
- Next, fill out the *Home Energy Worksheet* (HEW) online at *ERMU.thinkenergy.org* or return the paper copy to school by the due date. Each student who submits an HEW will receive a color-changing pencil.

## Website and Support

Visit *ERMU.thinkenergy.org* to view installation videos, submit your HEW, play games and access additional information.

Thank you for participating!
